

"LIFE THROUGH THE LENS"

DEWDROPS AND LOVE

There was heavy dew the other night, and in the morning, many water droplets were hanging upside down on the clothesline. All exciting and eye-catching in the sun. Interesting. Then comes the question; how? Why? Science calls it "surface tension", and there are some very complex equations to work out when a drop will "drop!"

With some things, it is best just to accept reality and enjoy the wonder.

Perhaps it is God's way of showing that while others, for whatever reason, might expect you to fail or to fall, such an outcome is not a foregone conclusion.

The earth is the LORD's, and everything in it,
The world and all who live in it;
for he founded it on the seas
and established it on the waters (**PSALM 24:1-2**)

Those dew drops could have a message from God. "You might think you are inconsequential, but I don't. I have in place something special so you cannot fall away from me. I have a name for that special "something". I call it "love."

Then a tiny gust of wind came through, and the droplets shivered and fell away from the line. We need to make times of peace in our busy lives, or the rush of life might blow us away from the connection to our Heavenly Father – the one who loves you and wants you to stay connected to his love.

Maybe next time you see a clothesline, or as you are pegging something to that line you don't ever think about, take some time to quietly talk to God about how he wants to hold onto you through his love. Remember, he does not want you to fall.

God bless,

Kevin
